

MOHAMED MAHMOUD

AI AUTOMATION ENGINEER | AI INTEGRATION | INTERNAL SYSTEMS

Kuwait +965 9933 8996 medo433447@gmail.com [LinkedIn](#) [GitHub](#)

AI PROJECT SHOWCASE <https://mohamed3042.github.io/flagship-portfolio/downloads/Mohamed-Mahmoud-AI-Automation-Project-Showcase.pdf>

PROFILE

BSc in Artificial Intelligence with 4+ years of professional experience, including one year building automation and internal systems at Medmac Kuwait. Replaces fragile manual work with practical, human-gated software: workflow engines, AI assistants, CRM and hiring automation, offline Python/SQLite tools, secure document pipelines, and bilingual web delivery. Work is spec-driven and AI-assisted: Mohamed owns requirements, decisions, review, verification, and operation.

CORE CAPABILITIES

AI Automation & Integration	Workflow Engines & Scheduling	Systems Integration	Internal Tools
Python & SQLite	TypeScript & Astro	Local AI / Ollama	Bilingual AR/EN (RTL)
CRM & Pipeline Design	LLM Adapters & Knowledge Bases	Human Approval Gates	Verification & Audit Trails

EXPERIENCE

AI Automation Engineer Jul 2025 - Jul 2026
Medmac Kuwait Co. (General Trading & Contracting) | Kuwait

- Officially hired as Information Systems Developer; AI Automation Engineer reflects the focused specialization and work performed. Built internal tools across operations, recruitment, IT, sourcing, and technical documentation.
- Built a 12-tab bilingual (AR/EN, RTL) CRM linking Meta spend, WhatsApp leads, quotation status, next actions, and engineer hand-off; it tracked 200+ contacts, 45 active named leads, 22 offers, and 0 recorded closures, with pricing and closing owned by engineering.
- Automated hiring intake across Gmail, WhatsApp, and file drops with 7 Python scripts and 3 scheduled jobs; parsed 142 CVs into 100 deduplicated records and supported 2 hires.
- Built three company-grounded AI assistants for lead qualification, quotation drafting, and campaign planning, backed by tailored instructions and company knowledge bases.
- Shipped a LAN-only quotations locker plus an RFQ workflow that consolidated 23 tenders from six months of email and recovered 4 live tenders missed by the manual list.
- Deployed Quotations Locker v2 with audited exact-state Undo/Redo and 90/90 tests while preserving all 4,729 quotation records; also delivered the bilingual website, document and packaging systems, IT fixes, and supplier research.

Social Media Manager & Digital Marketing Specialist 2021 - 2025
Al-Ma'ali Satellite Channel | Remote

- Owned cross-platform content strategy, publishing calendar, and per-platform optimization for an Islamic broadcast network.
- Grew Facebook 9.2K to 1M+, Instagram 3K to 50K, TikTok 0 to 33K, and YouTube 0 to 43K subscribers (self-reported; public channels available).

Data Entry Approx. 6 months
Mozodi | Kuwait startup

- Handled data-entry operations in a junior startup role; included for complete employment history.

SELECTED SYSTEMS & PORTFOLIO

RelayOps - AI Automation Command Center

2026

Public repository | <https://github.com/Mohamed3042/ai-automation-command-center>

- Built a Python/SQLite operations control plane with a visual workflow builder, scheduler, retries, persisted run evidence, alerts, reports, and human-reviewable actions.
- Optional OpenAI-compatible classification falls back automatically to a deterministic offline adapter; the repository records 56 tests and a successful latest Actions run.

Human-Gated Automation & Private Local AI

2026

Career Autopilot | LifeOS | Reclaim | private-repo proof in project showcase

- Built Career Autopilot in TypeScript/SQLite with consent logging and zero automatic sends; research, tailoring, and packaging stop at the human decision.
- Built LifeOS as an offline Ollama workspace over an encrypted vault, plus a rehearsed backup-delete-restore drill; Reclaim added a 1.77M-file live APFS scan with 0.0000% du drift and Finder Trash/restore proof alongside its measured NTFS engine.

Medmac Operations & Production Suite

2025-2026

Marketing Automation | Quotation Builder | Document Studio | Sheep BMS | MK Editor

- Shipped offline AR/EN tools for CRM journeys, quotations, flock operations, documents, media, and packaging; systems use SQLite, Electron/Python, local files, installers, and audit-friendly exports.
- Sheep BMS v4 added 10 QR-headed forms and on-device Arabic OCR that produces reviewed atomic drafts (18/18 release gates); its calm UI reduced five measured tasks from 29 to 16 clicks. MK Editor v5's installed universal Mac build passed 32/32 acceptance.

Engineering Automation Lab

2026

Spaceframe World | MacroForge | PetPoint Ops Hub | Prompt King

- Built Spaceframe World, a pre-release TypeScript/Tauri structural workflow with MCP agent control and a 325-test verification suite; engineering review remains mandatory.
- Built MacroForge Windows automation with independent UI Automation proof and a destination-only Unreal C++ runtime harness for MetaHuman LOD, groom, body and facial animation; 26 gates passed and all 28 planted failures were detected.
- Portfolio delivery maps 40 accepted video takes through one 200-second scroll film, proven with 401 forward and 401 reverse samples; the project book covers 21 recruiter-safe families from 51 audited repositories.

EDUCATION

Bachelor of Artificial Intelligence

Egyptian Russian University, Egypt | 2020 - 2024

CERTIFICATION

Verified AI Engineer Certification

Sahl

LANGUAGES

Arabic - Native

English - Fluent

WORK AUTHORIZATION

Egyptian national based in Kuwait on a valid Article 18 private-sector residency. Employer release confirmed; transfer not yet executed. Available immediately.

TECHNICAL STACK

Automation & AI

Workflow automation / Local AI / Ollama / AI assistants / Knowledge-base design / Human approval gates / Audit trails

Languages & Data

Python / TypeScript / C++ / GDScript / SQL / SQLite / HTML / CSS

Build & Delivery

Astro / Electron / Tkinter / Git / GitHub Actions / Automated testing

Operations

CRM design / Recruitment intake / Document automation / Print / PDF preflight / Arabic RTL delivery / Supplier research

METHOD & SCOPE

Business software is spec-driven and AI-assisted, with Mohamed as requirements author, decision-maker, reviewer, verifier, and operator. Delivery facts are claimed; unmeasured revenue impact is not.
